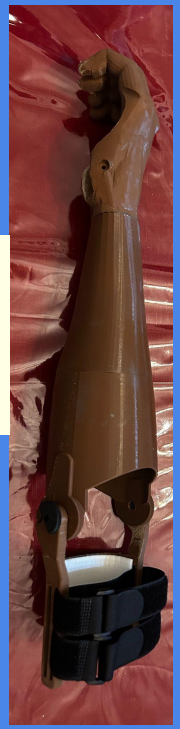
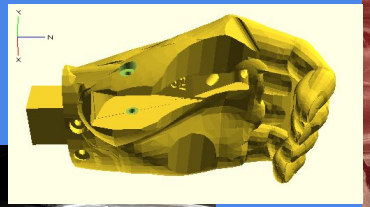
E-NABLE

Overview:
I'm an active member of the online Community E-NABLE. We build prosthetics for people who Can't afford professional prosthetists. Recently I've worked with the Uganda E-NABLE Coalition to build prosthetics for individuals in remote areas of Uganda.

Designs are open source and mostly parametric- mostly adjusted based on patient needs.

Build is made of 3D Printed parts, molded rubber, screws and special grade rubber bands for movement components. The cuff is thermoformed





Thermoforming the cuff
